Office Action Summary

Application No.

09/589,974

Applicant(s)

LEE ET AL.

Examiner

Daniel J. Ryman

Art Unit

2665

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
 - If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
 - If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
 - Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133).
- Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 30 January 2004.
- 2a) ☒ This action is FINAL. 2b) ☐ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1-12 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 1-9, 11, and 12 is/are rejected.
- 7) ☒ Claim(s) 10 is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☒ The drawing(s) filed on 30 January 2004 is/are: a) ☒ accepted or b) ☐ objected to by the Examiner.
- Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
- Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some * c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
2. ☐ Certified copies of the priority documents have been received in Application No. _____.
3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

Attachment(s)

- 1) ☒ Notice of References Cited (PTO-892)
- 2) ☐ Notice of Draftsperson's Patent Drawing Review (PTO-948)
- 3) ☐ Information Disclosure Statement(s) (PTO-1449 or PTO/SB/08)
Paper No(s)/Mail Date _____.
- 4) ☐ Interview Summary (PTO-413)
Paper No(s)/Mail Date. _____.
- 5) ☐ Notice of Informal Patent Application (PTO-152)
- 6) ☐ Other: _____.

DETAILED ACTION

Response to Arguments

1. Applicant's arguments filed 1/30/2004 have been fully considered but they are not persuasive. On page 12 of the Response, Applicant argues that Lee does not disclose using Internet Protocol for messages transmitted between the home agent and the mobile telephone including for messages transmitted between the home agent and the router and for messages transmitted on the proprietary interface between the router and the base transceiver station. Examiner, respectfully, disagrees. Lee explicitly discloses that when a device roams to another subnetwork that the messages sent by the home agent to the foreign agent use an internet protocol (Lee: col. 6, lines 26-49). These messages are sent using "IP Encapsulation within IP" (col. 5, lines 33-35) where "Encapsulation refers to a process of enclosing an original datagram as data inside another datagram with a new IP header" (col. 6, lines 44-49). As such, Examiner maintains that Lee discloses using Internet Protocol for messages transmitted between the home agent and the mobile telephone including between the home agent and the router and for messages transmitted on the proprietary interface between the router and the base transceiver station.

2. Applicant goes on to argue that the "Curry and Raychaudhuri referenced do not overcome the deficiencies in the Lee reference". Since Examiner maintains that the Lee reference is not deficient in the aspects argued by Applicant, the Curry and Raychaudhuri references do not need to remedy the deficiencies of the Lee reference.

3. Applicant further argues that the references teach away from the Applicant's invention. Examiner, respectfully, disagrees. For the reasons cited above and the reasons presented in the

Art Unit: 2665

previous rejection, Examiner maintains that the cited references render the claimed invention obvious.

4. Finally, Applicant argues that Applicant's invention solves problems recognized by the cited references. While the disclosed invention may be different from the prior art, such differences must be claimed in order to distinguish the claimed invention from the prior art.

5. Thus, Examiner maintains the rejections of claims 1-9, 11, and 12. Applicant is urged to include further limitations to the claimed invention in order to distinguish the claimed invention from the prior art.

Claim Rejections - 35 USC § 103

6. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

7. Claims 1-7, 9, 11, and 12 are rejected under 35 U.S.C. 103(a) as being unpatentable over Lee et al (USPN 6,535,493) in view of Curry et al (USPN 6,359,880).

8. Regarding claims 1 and 12, Lee discloses an internet protocol-based communications system, comprising: a router (ref. 114, 144), a foreign agent, coupled to the router (col. 2, line 51-col. 3, line 4); a Base Transceiver Station (BTS) (access point), coupled to the router, for communicating with a mobile telephone within a transmission area associated with the BTS, wherein the router communicates with the BTS using a proprietary interface (ref. 110, 120) (col. 2, line 51-col. 3, line 4 and col. 4, lines 41-42); a home agent (HA), coupled to the router (col. 2, line 51-col. 3, line 4) where "coupled" is broadly interpreted to include indirect connections, the

Art Unit: 2665

HA communicating with the router and the foreign agent for registering mobile units and transmitting messages through an internet-protocol network (col. 2, line 51-col. 3, line 4 and col. 5, line 28-col. 6, line 57), wherein messages between the HA and the mobile unit use an internet protocol between the HA and the router and the proprietary interface between the router and the BTS (col. 2, line 51-col. 3, line 4 and col. 5, line 28-col. 6, line 57). Lee does not expressly disclose that the internet protocol-based communications system is an internet protocol-based cellular telephone communications system; however, Lee does leave open the possibility that the mobile units could be a variety of mechanisms (col. 3, lines 40-42 and col. 4, lines 46-67). Curry teaches, in a public wireless internet gateway system, having an internet protocol-based communications system be an internet protocol-based cellular telephone communications system in order to allow a cheaper alternative to the transport of calls to and from wireless system via telephone carrier networks (col. 1, lines 17-36; col. 2, lines 20-38; col. 3, lines 54-67; and col. 4, lines 2-49). It would have been obvious to one of ordinary skill in the art at the time of the invention to have the internet protocol-based communications system be an internet protocol-based cellular telephone communications system in order to allow a cheaper alternative to the transport of calls to and from wireless system via telephone carrier networks.

9. Regarding claim 2, referring to claim 1, Lee in view of Curry discloses a second BTS, wherein a handoff between the BTS (ref. 102 or 104) and the second BTS (ref. 132 or 134) is performed through the internet protocol network (Lee: col. 2, line 51-col. 3, line 4 and col. 5, line 28-col. 6, line 57).

10. Regarding claim 3, referring to claim 2, Lee in view of Curry discloses that a hand off is performed between the BTS and the second BTS using asynchronous transfer mode (ATM)

Art Unit: 2665

communications between the router and the BTS and the router and the second BTS (Lee: col. 2, line 51-col. 3, line 55 and col. 5, line 28-col. 6, line 57 and Curry: col. 2, lines 38-51). Lee in view of Curry does not expressly disclose that the hand off is a soft hand off (SHO). Examiner takes official notice that soft hand offs are very old and well known in the art since soft hand offs reduce the probability that a connection will be dropped during hand off. It would have been obvious to one of ordinary skill in the art at the time of the invention to have the hand off be a soft hand off in order to decrease the probability that a connection will be dropped during hand off.

11. Regarding claim 4, referring to claim 3, Lee in view of Curry discloses that the SHO is performed using ATM between the BTS and the second BTS and the mobile telephone (Lee: col. 2, line 51-col. 3, line 55 and col. 5, line 28-col. 6, line 57 and Curry: col. 2, lines 38-5).

12. Regarding claim 5, referring to claim 1, Lee in view of Curry discloses that the HA directs a message to the mobile telephone using an internet protocol address (Lee: col. 2, line 51-col. 3, line 55 and col. 5, line 28-col. 6, line 57).

13. Regarding claim 6, Lee discloses an internet protocol-based communications system, comprising: a handoff server (router) (ref. 114, 144), a Base Transceiver Station (BTS) (access point), coupled to the handoff server, for communicating with a mobile telephone within a transmission area associated with the BTS, wherein the handoff server communicates with the BTS using a proprietary interface (ref. 110, 120) (col. 2, line 51-col. 3, line 4 and col. 4, lines 41-42); a home agent (HA), coupled to the handoff server (col. 2, line 51-col. 3, line 4) where “coupled” is broadly interpreted to include indirect connections, the HA communicating with the handoff server for transmitting messages through an internet-protocol network (col. 2, line 51-

Art Unit: 2665

col. 3, line 4 and col. 5, line 28-col. 6, line 57), wherein messages between the HA and the mobile telephone use an internet protocol between the HA and the handoff server and the proprietary interface between the handoff server and the BTS (col. 2, line 51-col. 3, line 4 and col. 5, line 28-col. 6, line 57). Lee does not expressly disclose that the internet protocol-based communications system is an internet protocol-based cellular telephone communications system; however, Lee does leave open the possibility that the mobile units could be a variety of mechanisms (col. 3, lines 40-42 and col. 4, lines 46-67). Curry teaches, in a public wireless internet gateway system, having an internet protocol-based communications system be an internet protocol-based cellular telephone communications system in order to allow a cheaper alternative to the transport of calls to and from wireless system via telephone carrier networks (col. 1, lines 17-36; col. 2, lines 20-38; col. 3, lines 54-67; and col. 4, lines 2-49). It would have been obvious to one of ordinary skill in the art at the time of the invention to have the internet protocol-based communications system be an internet protocol-based cellular telephone communications system in order to allow a cheaper alternative to the transport of calls to and from wireless system via telephone carrier networks.

14. Regarding claim 7, referring to claim 6, Lee in view of Curry discloses that the proprietary interface is asynchronous transfer mode (ATM) (Lee: col. 2, line 51-col. 3, line 55 and col. 5, line 28-col. 6, line 57 and Curry: col. 2, lines 38-51) where Lee discloses using IP in the LAN and Curry discloses using ATM to transport IP packets.

15. Regarding claim 9, referring to claim 6, Lee in view of Curry discloses that a handoff of a mobile telephone between the BTS and a second BTS within the cellular telephone

Art Unit: 2665

communications system is handled through the handoff server (Lee: col. 2, line 51-col. 3, line 55 and col. 5, line 28-col. 6, line 57).

16. Regarding claim 11, referring to claim 6, Lee in view of Curry discloses that a handoff between the BTS and a second BTS is anchored through the first BTS until updates can be made at the HA (Lee: col. 9, line 11-col. 10, line 12).

17. Claim 8 is rejected under 35 U.S.C. 103(a) as being unpatentable over Lee et al (USPN 6,535,493) in view of Curry et al (USPN 6,359,880) as applied to claim 6 above, and further in view of Raychaudhuri et al (USPN 5,684,791).

18. Regarding claim 8, referring to claim 6, Lee in view of Curry does not expressly disclose that the BTS communicates with the mobile telephone using asynchronous transfer mode (ATM). Raychaudhuri teaches, in a wireless system, using ATM to communicate between a mobile unit and a BTS in order to facilitate seamless support of network-based multimedia applications on both fixed and portable terminals (col. 1, lines 16-58). It would have been obvious to one of ordinary skill in the art at the time of the invention to use ATM to communicate between a mobile unit and a BTS in order to facilitate seamless support of network-based multimedia applications on both fixed and portable terminals.

Allowable Subject Matter

19. Claim 10 is objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Conclusion

20. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Bender et al (USPN 6,215,779) see entire document which pertains to a wireless data communication system. Ahopelto et al (USPN 5,970,059) see entire document which pertains to routing packets in a packet radio network.

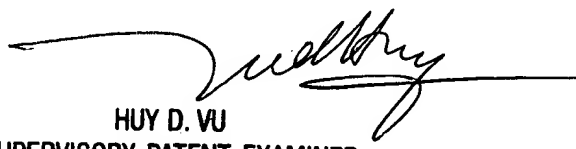

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Daniel J. Ryman whose telephone number is (703)305-6970. The examiner can normally be reached on Mon.-Fri. 7:00-5:00 with every other Friday off.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Huy Vu can be reached on (703)308-6602. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>.
